This invention describes novel nucleic acid (cDNA) sequences (A) which have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete

(B) are used (1) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (ii) for generation of specific antibodies. (A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. AAV76505-Y76638 represent protein fragments encoded by the human ovarian tumor cDNA library derived EST fragments represented in AAZ77450-Z77572.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          present invention.

N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P

The products of the invention can be used in the stu and treatment of e.g. tumour metastasis, bacterial colonisation, susceptibility to and persistence of infection, microbial infections, AIDS, cystic fibrosis, chronic obstructive pulmonary disease, asthma, sinonasal inflammatory disease, inflammatory bowel disease, bronchitis, or Crohn's disease. The products can also be used for detection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated mucous-associated polypeptide, zsig10 - used to developroducts for treating e.g. tumour metastasis, microbial infections, cystic fibrosis, asthma, bronchitis or inflammatory bowel disease

Its proteins can be used as nutritional sources or supplements. The proteins may also have cytokine functions, immune modulating functions, haematopoiesis regulating activity, activiny/inhibin regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity.

                                                                                                                                                                                                                                                                                                                                                                                                                          tissue types or cell species, as well as identifying tissue specific soluble proteins. The sequences can be used for chromosome mapping and identification of genes associated with hereditary diseases or drug response. Signal sequences from the cDNAs can be used in construction of secretion vectors. Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter sequences. Some of the proteins may be useful in diagnosing and treating several disorders including, but not limited to: cancer, hyperlipidaemia, cardiovascular and neurodegenerative disorders, autoimmune diseases, and rheumatic diseases, embryogenic disorders, hypertension, renal injury, amino acidurias, hypoglycaemia, male rat infertility and myopathies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  09-FEB-1998;

The extended cDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive identification by DNA sequencing. They may also be used in alternative fingerprint identification techniques. Antibodies against the proteins encoded by the extended cDNAs are useful in identification of the protein second by the extended cDNAs are useful in identification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Extended

Claim 61; Fig 28; 286pp; English.

CC one of the human PRO proteins designated PRO211, PRO290, PRO341, PRO335, CC PRO519, PRO717, PRO809, PRO830, PRO848, PRO943, PRO1005, PRO1009, CC PRO5197, PRO1030, PRO1097, PRO11107, PRO11117, PRO11182, PRO1009, CC PRO1187, PRO1281, PRO233, PRO339, PRO834, PRO1317, PRO1170, PRO2094, CC PRO1187, PRO12881, PRO233, PRO339, PRO834, PRO1317, PRO11710, PRO2094, CC PRO2145 OR PRO2198. PRO antagonists can be used to inhibit tumour cell CC growth. The PRO polypeptides and nucleotides are useful in the CC treatment, diagnosis and prevention of cancer. The antibodies and other CC anti-tumour compounds maybe used to treat various conditions, including those characterised by overexpression and/or activation of the amplified CC progress. Exemplary conditions or disorders to be treated with such CC antibodies and other compounds include benign or malignant tumours CC (e.g., renal, liver, kidney, bladder, breast, gastric, ovarian, CC carcinomas, sarcomas, glioblastomas, and various head and neck tumours), CC carcinomas, sarcomas, glioblastomas, and various head and neck tumours), CC epithelial, stromal and blastocoelic disorders, and inflammatory, CC angiogenic and immunologic disorders. AAC58242 to AAC58366 represent PCR primers and hybridisation probes used in the isolation of the human PRO The present invention describes an isolated antibody that binds

The invention describes the novel use of a protein found in breast cancer cell membranes (BCMP 7) for diagnosing, preventing and treating breast cancers. The peptide has cytostatic action and potential uses in gene therapy and in vaccines. The polypeptide, antisense nucleic acids, or fusion proteins comprising and Green Fluorescent protein or the DsRR Fluorescent protein, antibodies specific for and/or nucleic acid are used for the prevention and/or treatment of breast cancer. Antibodies against may also be used for screening for and/or diagnosis of breast

The method for monitoring/assessing breast treatment in a patient and for the identification of metastatic cancer cells in samples from a patient. This sequence is breast cancer cell associated protein 7 (BCMP 7), encoded by a gene loc chromosome 7p21.3, described in the method of the invention.
        This invention relates to a human growth factor polypeptide huXAG-1 also known as a colon cancer specific gene (CCSG). HuXAG-1 stimulates cell proliferation as a growth factor. The HuXAG-1 protein is useful for identifying compounds capable of enhancing or inhibiting cellular response induced by huXAG-1. The protein is also useful for stimulating proliferation of cells e.g. colon, breast, liver and lung cells, and hepatocytes. It is useful for alleviating or treating liver diseases and pathologies such as fulminant liver failure caused by cirrhosis, liver damage caused by viral hepatitis and toxic substances, for preventing and treating damage to the lungs caused by various pathological states and

The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cancer. HuXAG-1 and the identified antagonist are useful for treating cancer, in particular colon cancer. Detecting altered levels of huXAG-1 and its polynucleotides are useful for diagnosing or detecting cancer in mammals. The gene encoding huXAG-1 is useful for monitoring human colorectal carcinoma. huXAG-1 nucleic acid molecules are also useful for

They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
The extended cDNAs (or genomic DNAs obtainable from them) may be used to prepare PCR primers and probes. These are useful for forensic matching or positive identification by DNA sequencing. They may also be used in alternative fingerprint identification techniques. Antibodies against the proteins encoded by the extended cDNAs are useful in identification of tissue types or cell species, as well as identifying tissue specific soluble proteins. The sequences can be used for chromosome mapping and

Other sequences derived from the extended cDNAs can be used to clone upstream genomic DNA sequences including promoters. This is in turn useful for identifying proteins that interact with promoter sequences. Some of the proteins may be useful in diagnosing and treating several disorders including, but not limited to: cancer, hyperlipidaemia, cardiovascular and neurodegenerative disorders, autoimmune diseases, and rheumatic diseases, embryogenic disorders, hypertension, renal injury, amino acidurias, hypoglycaemia, male rat infertility and myopathies.
AAX41094 to AAX41347 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAX12261 AAX12514, respectively. The proteins given represent the signal pep

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, receptor/ ligand activity, anti-inflammatory activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for polypeptide into a membrane, or importing a polypeptide into a cell.
AAZ42265 to AAZ43075 represent novel 5' expressed sequence tag (EST) sequences, corresponding to human secreted proteins. AAY64651 to AAY64438 represent the EST-related proteins corresponding to AAZ42265 AAZ43053. The 5' ESTs can be used for producing secreted human gene products. They can be used to identify and isolate 5' untranslated

The ESTs are also useful as probes for CC chromosome mapping, and to obtain full length cDNA clones. The ESTs can CC diagnostic procedures to identify individuals, or in CC diagnostic procedures to identify individuals, or in CC constituting from abnormal gene expression. The products may also be used in CC gene therapy protocols. The nucleic acids encoding signal peptides can be CC used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide CC into a cell. The proteins encoded by the EST sequences may be useful in CC treating a variety of human conditions. Secreted proteins have CC valuable. AAZ42249 to AAZ42264 and AAY64644 to AAY64650 represent CC valuable. AAZ42249 to AAZ42264 and AAY64644 to AAY64650 represent very

caused by viral hepatitis and toxic substances. They can also be used to stimulate or promote liver regeneration, e.g. after surgery. They can also be used to prevent and head damage to the lungs caused by various pathological states. They can be used to stimulate proliferation and differentiation and promote the repair of alveoli and bronchiolar epithelium to prevent, attenuate, or treat acute or chronic lung damage, e.g. emphysema, which results in the progressive loss of alveoli, and inhalation injuries, e.g. resulting from smoke inhalation and burns, that cause necrosis of the bronchiolar epithelium and alveoli. They can also be used to stimulate the proliferation and differentiation of breast tissue and could therefore be used to promote healing of breast tissue injury due to surgery, trauma or cancer. Antagonists can be used to treat hyperproliferative disorders, including cancer, in particular hepatocellular carcinoma, osteoclastoma, breast cancer, or or colon cancer. The products can also be used for detection and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cells, antibodies, and screening methods for identifying agonists and antagonists of huXAG-3 are provided. HuXAG polypeptides are growth factors and can be used to stimulate proliferation of cells. They can be used to stimulate the proliferation and differentiation of hepatocytes to alleviate or treat liver diseases and pathologies such as fulninant liver failure caused by cirrhosis, liver damage caused by viral hepatitis and toxic substances. They can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    human growth factors also including huXAG-1 (see AAW3/844) and huXAG-2 (see AAW3/845). These proteins share homology with the XAG protein of Xenopus laevis, which is involved in embryogenesis XAG protein of Xenopus laevis, which is involved in embryogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This polypeptide comprises huXAG-3, a member of a novel far human growth factors also including huXAG-1 (see AAW37844)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Fig 3A-B; 141pp;

DISEASE: DEFECTS IN OCRL ARE THE CAUSE OF LOWE'S OCULOCE
SYNDROME, A DISEASE CHARACTERIZED BY HYDROPHTHALMIA, CAT
MENTAL RETARDATION, VITAMIN D-RESISTANT RICKETS, AMINOAC
AND REDUCED AMMONIA PRODUCTION BY THE KIDNEY.

SIMILARITY: BELONGS TO THE INOSITOL-1,4,5-TRISPHOSPHATE
5-PHOSPHATASE TYPE II FAMILY.

SIMILARITY: CONTAINS 1 GAP DOMAIN.
